Thanks Molly. Yes, let's share with Amy the language we plan to send along. I added one sentence in red as we know the community members are working on a letter to MO. Copying Alba to help get 30 mins with Amy to talk through the options (phrasing/timing/etc.) that the team is evaluating. I am sure Amy's calendar will be tough, so we'll have to adjust ours to fit hers.

Thanks!

Subject: Alameda: Email Follow Up to Jason and Neighbors

Hi All-

Please find below a draft of the email to be sent as a follow up to Jason concerning Alameda Lane Repurposing. Please let me know if you have any issues. Tykus, let me know if you also want me to share with Amy.

Once Brett is back in town, I am hoping to see what we can do from a design perspective and we can then review next steps with Amy.

Thanks and have a great weekend!

Message to be sent to Jason, which will be shared with Jill Anschutz, Kimberly Kolesar, Cody, Belzley, Amy Guttmann, Illana Poley and Lisa Diedrich

I wanted to follow up from our recent meeting. We are taking the neighbors' concerns very seriously and assessing what we can do to address some of the concerns they brought up. We are currently briefing DOTI leadership and hope to share more about our next steps by the end of July. There were also questions and requests for information at the meeting that we promised to follow up on. Please find our responses below:

Will this project cause an increase in congestion on side streets, like E Virginia Ave and E Bayaud Ave?

Based on DOTI's analysis, the impact to side streets will be minimal; no more than 10% of vehicles will reroute throughout the entire day. A diversion analysis was conducted and anticipates that Virginia Avenue will experience approximately 490 additional vehicles per day, which translates to ~1-2 vehicles per minute.

Crash Data

We ran the crash data for the most recent five years (July 1, 2020 through July 3, 2025) and found there have been 255 crashes which is up from the 192 (from 2018-2022) when we first assessed the corridor.

Peak Hour Volumes

Existing peak hour turning movement counts were conducted at all 16 study area intersections along Alameda Avenue on Tuesday, September 20, 2022. The counts were conducted in 15-minute intervals during the morning and afternoon peak hours of adjacent street traffic from 7:00 AM to 9:00 AM and 4:00 PM to 6:00 PM. In addition, average daily traffic (ADT) volumes along three sections of Alameda Avenue were collected on the same day as the peak hour counts with the exception of the Lincoln Street to Logan Street ADT volume.

I have attached the data associated with these traffic counts.

Speed Limit

The posted speed limit along Alameda Avenue is 30 miles per hour. The revised speed limit post-project installation is planned to be 25 miles per hour. Any changes to the project scope could require a re-evaluation of the speed limit change.

Many of the questions that were asked are also addressed on our website in an FAQ<<https://www.denvergov.org/Government/Agencies-Departments-Offices/Agencies-Departments-Offices-Directory/Department-of-Transportation-and-Infrastructure/Programs-Services/Projects>>. Please let the neighbors know that we are always here to answer any other questions they may have.

Thank you-
Molly
